ML-Driven Stock Signal Engine

Empowering **smarter investment** decisions
through explainable AI.

Transforming financial data into actionable
intelligence.

Karthik Vodnala + CS Team

Empowering investors through AI

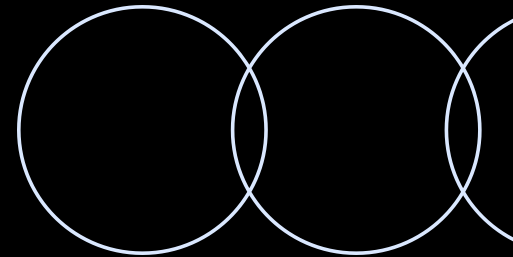

Investors Lost in Data

Overwhelmed by Information Chaos

Drowning in data : Charts, news, and reports flood investors daily.

Emotion over logic : Fear and hype drive most trading decisions.

No time for analysis : Researching multiple stocks each day is unrealistic.

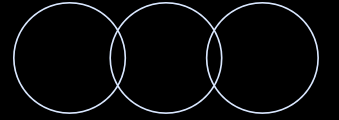

AI-Powered Assistant

Transforming Investment Decisions

Our AI system uses machine learning and real-time data to help investors make confident bullish or bearish decisions with clarity.

Data Pipeline Overview

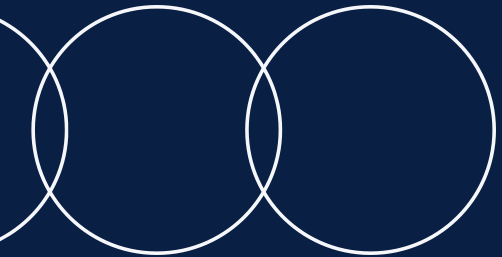

- Understanding ML Architecture
- This section illustrates the **data pipeline** powering our AI-driven stock signals, showcasing how various data sources are integrated to generate actionable insights for investors.

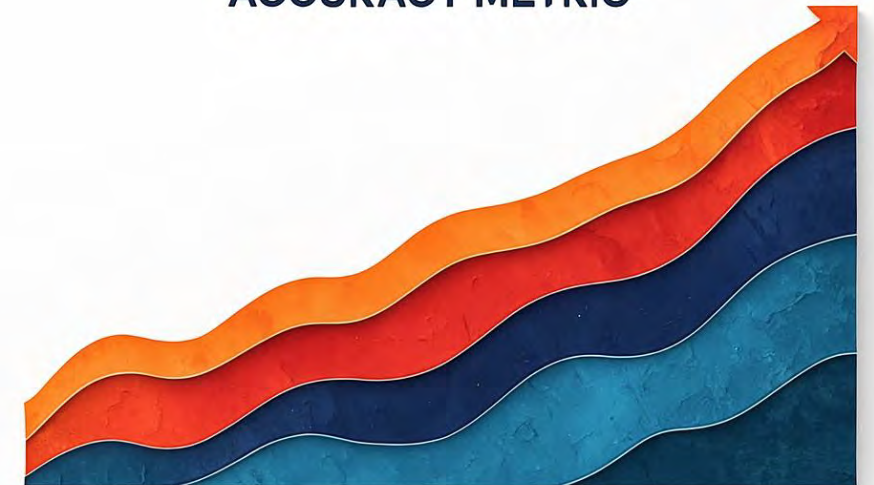

Results Overview

Dashboard Insights & Metrics

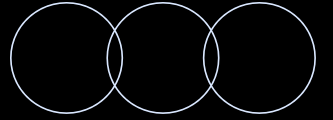

Real-time dashboards visualize how the model performs across different stocks and timeframes, giving investors clear metrics to **trust** their next move.

ACCURACY METRIC

Next Steps

Initial Launch

Launching our investment assistant to early adopters for feedback and adjustments.

User Testing

Gathering insights from users to refine features and improve performance by their experiences.

Full Deployment

Officially introducing the AI-driven platform to all retail investors with marketing initiatives.

Global Investor Empowerment
