

Virtual Reality in Nursing School

Exploring immersive learning for future nurses – Tina Gaffney

Nursing schools are increasingly adopting VR for clinical and skills-based training. Enhances experiential learning through immersive technology.

Benefits

Enhances clinical decision-making and critical thinking.

Enables remote, repeatable training scenarios.

Safe environment for practicing high-risk procedures.

Promotes engagement and confidence among students.

**High initial cost of
VR equipment and software.**

**Need for technical training
for instructors.**

**Possible motion sickness
or discomfort for some users**

Limitations

Future of VR in Nursing

- ☐ Integration with AI for adaptive learning experiences.
- ☐ Expansion of interprofessional virtual simulations.
- ☐ Potential to become a standard component of nursing curricula.
